Wrapping Styles

In Line with Text	The object is "inside" of the text. Makes it hard to move the object around. This is the default wrapping style for pictures and clip art.
Square **Tight** **Through**	Makes the text "wrap around" or "hug" the object.
Top and Bottom	Puts the object on its "own line".
Behind Text	Puts the object behind the text. Makes it easy to move the object around the document, but can make it hard to select the object.
In Front of Text	Puts the object on top of the text. Makes it easy to move the object around the document.
